

How to add top baby songs for your baby slideshow

Parents really like to take pictures of their babies, for pictures can keep life experience and memory well, such as the first born, first birthday, happy time in kindergarten with friends and so on. And it's also a good way to share your happiness and the moment of the baby with others. Here I suggest parents to make the pictures into slideshows. So you can enjoy the pictures, as well as your favorite top songs for babies, the text added to the picture to show your thoughts and other good things.

Here I recommend good slideshow software to you. For Mac user, you can use [Slideshow DVD Creator](#); for Windows user, you have [DVD Photo Slideshow](#). You can simply make a slideshow by just dragging & dropping the pictures and music into the soft, and make the slideshow beautiful by adding transition effect, theme, pan & zoom effect which was featured by the software. Then encode it to mov/ mp4 or burn it to DVD, so you can enjoy it with people. You can first download the free version to have a test. The only difference of the trial and full version is the 36 photos limitation. So you can have a full taste of the software.

I'm going to show you some list of top baby songs, so you can save your time searching them. After pick your favorite songs, Let's start to make a stunning slideshow for your babies. Below is the screenshot of my slideshow with my favorite songs with a list a top baby songs for you:
